

$$\begin{array}{c} \text{Genus-2 surface with handle} \end{array} = U \left(\begin{array}{c} \text{Genus-2 surface with dashed red handle and region } k \end{array} \right),$$

The diagram illustrates a transformation U between two surfaces. On the left, a genus-2 surface (a torus with two holes) is shown with a handle (a small oval) attached to its right side. The label A is placed below the surface. This is followed by an equals sign and the letter U . To the right of U is a large left-facing curly bracket. Inside the bracket is a genus-2 surface with a dashed red handle (a small oval) attached to its right side. The label A is placed below the surface, and the label k is placed to the right of the dashed red handle. The entire expression is followed by a comma.
