

$$\Delta(x) = (x \otimes 1)e = e(1 \otimes x)$$

$$\Delta = \text{diagram 1} = \text{diagram 2}$$

The diagrammatic equation shows that the comultiplication Δ is represented by two equivalent configurations of strands. In the first configuration, a vertical strand has a dot, and a curved strand starts from this dot, arches to the right, and then continues as a vertical strand. In the second configuration, a curved strand starts from the left, arches to the right, and ends at a dot on a vertical strand, which then continues upwards. The two configurations are separated by an equals sign, indicating they are equivalent.
