

Diagrammatic equation for the identity on V_+ :

A vertical line with a loop (representing a trace) is equal to a straight vertical line. The loop is formed by a horizontal segment at the top, a vertical segment going down, a horizontal segment, and a vertical segment going up to the top.

$$(V_+ \rightarrow V_+ \otimes V_- \otimes V_+ \rightarrow V_+) = \text{id}_{V_+}$$

Diagrammatic equation for the identity on V_- :

A vertical line with a loop (representing a trace) is equal to a straight vertical line. The loop is formed by a horizontal segment at the bottom, a vertical segment going up, a horizontal segment, and a vertical segment going down to the bottom.

$$(V_- \rightarrow V_- \otimes V_+ \otimes V_- \rightarrow V_-) = \text{id}_{V_-}$$
