

The diagram illustrates a transformation U between two surfaces. On the left, a genus-2 surface (a torus with a handle) is shown. The handle is represented by a small oval on the right side. The label A is placed inside the main body of the surface. This surface is equated to U times a large bracketed expression. Inside the bracket is another genus-2 surface, where the handle is represented by a dashed red oval. The label A is again inside the main body, and the label k is placed in the region to the right of the dashed handle. A comma follows the closing bracket.

$$\text{Surface}_1(A) = U \left(\text{Surface}_2(A, k) \right),$$
