

$$\frac{1}{\dim(\mathcal{C})} \sum_{j,k \in \mathcal{O}(\mathcal{C})} d_j d_k$$

Diagram illustrating a bipartite graph structure. On the left is a node labeled φ , and on the right is a node labeled φ^* . From φ , there are two outgoing edges to φ^* : an upper edge labeled X_j and a lower edge labeled X_k . From φ , there are also two outgoing edges to a set of nodes $V_1, \dots, V_n$ above it. From φ^* , there are two incoming edges from a set of nodes $V_n, \dots, V_1$ above it.

$$= \sum_{i \in \mathcal{O}(\mathcal{C})} d_i$$

Diagram illustrating a bipartite graph structure. On the left is a node labeled φ , and on the right is a node labeled φ^* . There is a single edge from φ to φ^* labeled X_i . From φ , there are two outgoing edges to a set of nodes $V_1, \dots, V_n$ above it. From φ^* , there are two incoming edges from a set of nodes $V_n, \dots, V_1$ above it.
