

Diagrammatic equation for the identity on V_+ . On the left, a vertical line with a downward arrow is shown with a small loop on its left side. This is followed by an equals sign and a straight vertical line with a downward arrow. To the right of the equals sign is the expression $(V_+ \rightarrow V_+ \otimes V_- \otimes V_+ \rightarrow V_+) = \text{id}_{V_+}$.

$$\begin{array}{c} \text{Diagram with loop} \end{array} = \begin{array}{c} \text{Straight line} \end{array} \quad (V_+ \rightarrow V_+ \otimes V_- \otimes V_+ \rightarrow V_+) = \text{id}_{V_+}$$

Diagrammatic equation for the identity on V_- . On the left, a vertical line with an upward arrow is shown with a small loop on its left side. This is followed by an equals sign and a straight vertical line with an upward arrow. To the right of the equals sign is the expression $(V_- \rightarrow V_- \otimes V_+ \otimes V_- \rightarrow V_-) = \text{id}_{V_-}$.

$$\begin{array}{c} \text{Diagram with loop} \end{array} = \begin{array}{c} \text{Straight line} \end{array} \quad (V_- \rightarrow V_- \otimes V_+ \otimes V_- \rightarrow V_-) = \text{id}_{V_-}$$
